Professional Summary

MCA student and aspiring Full Stack Developer with hands-on experience building academic projects using React.js, Node.js, Express.js, MongoDB, and Python. Familiar with REST APIs, authentication, real-time communication, and basic NLP-based text classification. Looking for an entry-level software development opportunity to learn and contribute.

Education

Vellore Institute of Technology (VIT)	2025 – 2027
Master of Computer Applications (MCA)	

Invertis University	2022 – 2025
Bachelor of Computer Applications (BCA)	

Technical Skills

Languages: Java, JavaScript, Python, SQL

Web Development: React.js, Node.js, Express.js, HTML, CSS, Tailwind CSS

Databases APIs: MongoDB, MySQL, REST APIs, JWT, Socket.IO

Machine Learning: NLP, Text Classification, TF-IDF, Linear SVM, CNN, BiGRU

Tools: Git, GitHub, Postman, Flask

Projects

StayNest – Hotel Listing and Booking Platform

- Built a hotel booking platform using React, Node.js, and MongoDB, allowing users to browse properties, make bookings, and submit reviews.
- Developed REST APIs with Express.js and Mongoose to handle users, property listings, bookings, and reviews in a structured manner.
- Implemented Passport.js authentication and authorization with Mongoose validation, helping secure user actions and maintain reliable application data.
- Integrated Cloudinary for property image uploads and created responsive user interfaces, making property browsing easier across different screen sizes.

NexusMeet – Video Conferencing Application

- Built a browser-based video conferencing application that allows users to create or join meeting rooms for real-time communication.
- Used Socket.IO for room handling, participant updates, and WebRTC signaling, enabling users to establish peer-to-peer media connections.
- Implemented WebRTC audio and video calling with screen sharing and media controls, improving the overall online meeting experience.
- Developed a React.js interface and used MongoDB for application data storage, supporting meeting management and user session handling.

GrievEase – Campus Grievance Management Platform

- Built a grievance management application for students and staff to submit, monitor, and manage campus-related complaints efficiently.
- Developed the platform using React.js, Node.js, Express.js, MongoDB, Flask, and Socket.IO to support the complete complaint workflow.
- Trained and compared TF-IDF plus Linear SVM, 1D CNN, and BiGRU models; selected Linear SVM after achieving 92.89% classification accuracy.
- Implemented JWT login, role-based dashboards, real-time complaint updates, and priority rules to support faster complaint handling by administrators.
